Languages & Frameworks

- JavaScript
- HTML
- CSS
- React
- Node.js
- Express.js

Styling & Design

- Tailwind CSS
- Responsive Design
- Glassmorphism UI/UX

Databases

- MongoDB
- SQL
- Schema Design

Tools & APIs

- Git
- GitHub
- Vercel
- REST APIs
- EmailJS
- YouTube Data API

EDUCATION

Addis Ababa University

College of Technology and Built Environment

B.Sc. Chemical Engineering (4th Year)

Expected June 2027

Applying rigorous algorithmic design, system optimization, and quantitative analysis from engineering coursework to scalable software architecture and clean relational database systems.

Hello, I'm Atalay Kahsay

Full Stack Developer specializing in the MERN stack, building secure, scalable, and visually refined web applications — from authenticated CRM platforms with role-based access control to immersive, animation-driven interfaces. Passionate about clean architecture, thoughtful UI/UX, and turning complex requirements into reliable, production-ready software.

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern

May 2026 – June 2026

Future Interns · Remote

- Mini-CRM Platform:** Engineered a full-stack Customer Relationship Management platform featuring dynamic lead tracking and sales pipeline management. Integrated secure user authentication, role-based access control (RBAC), password recovery, and analytics dashboards utilizing React, Node.js, Express, and MongoDB.
- Golden Fork Restaurant Website:** Built a premium fine-dining web application featuring an interactive media gallery and automated email newsletter subscription system. Programmed a highly responsive, immersive dark UI with customized gold aesthetics using JavaScript, React, and modular CSS.
- Personal Developer Portfolio:** Conceptualized and deployed a modern portfolio website highlighting personal engineering projects, implementing smooth high-performance animations and a sleek glass-effect UI using Tailwind CSS and React. Integrated EmailJS for dynamic, direct client communication channels.

TECHNICAL PROJECTS

Apple Homepage Clone — Independent Project

2026

- Architected a fluid, pixel-perfect clone of the official Apple landing page, optimizing responsive typography and fluid layouts to maintain an optimal visual presence across mobile, tablet, and desktop viewports.
- Integrated the YouTube Data API to establish a dynamic video presentation section, enabling seamless, low-latency promotional media streaming directly within a custom React frontend interface.

Utility Applications Suite — Independent Project

2025

- Programmed a diverse suite of programmatic production utilities including a functional To-Do List application for lifecycle task management, a cryptographically secure Random Password Generator, an active Age Calculator, and an interactive Rock-Paper-Scissors game to master client-side state handling, DOM manipulation, and core asynchronous JavaScript logical structures.
